Winch Construction Cages

IR's construction cages make using, moving, storing, and protecting IR air winches easier than ever. Designed to meet ANSI/ASME 5:1 structural design codes for lifting, they are a welcome relief from the liability risk of homemade units.

■ **Construction cages are:**

- Made by certified welders from either 2 ½ by ¼ or 3 by ¾ inch steel bar for maximum protection.
- Their own perfect shipping containers. No wooden skids or pallets required.
- Designed with generously sized cutouts in the base for easy fork lift access.
- Standard with welded pins in the uprights so they can be stacked up to three high, saving valuable floor or yard space.
- Mounted on a steel base that allows easy bolting or welding to the deck.
- Equipped with lifting eyes to allow a balanced two point pick from overhead. The lifting eyes accept large hooks and are designed to handle the cage and the winch with a full drum of wire rope.
- Wide open in the front for cable take off from the winch at an angle.
- Hot dip galvanized for maximum protection from corrosion.

How to Order:

Examples: order **BU7AE** or **FA5A-LMX1E** for a winch in the cage, or order **CC-BU7A** or **CC-FA5A-LMX1** for the cage only. Custom inquiries welcome. Please send a dimensional drawing of the winch to our engineering department.
